Audit Management

Audit management

Audit is defined as a systematic and independent examination to determine whether quality activities and related results comply with planned arrangements and whether these arrangements are implemented effectively and are suitable to achieve objectives.

Types of Audit:

There are various types of audits in any organization based on customer or standards requirements. Typically following types of audits are used in manufacturing / automotive industries:

1. Customer Audits
2. Internal System / Process/ Product Audit

This module helps you to track all types of audits, their countermeasure, responsibilities and due dates
