## Machine Management

- Every organization needs to identify its critical machines and take suitable maintenance actions as defined below:
  - Breakdown Maintenance:
    - In the event of a breakdown, note down break down start and completion time, cost of spares used.
  - Preventive Maintenance
    - We should planned preventive maintenance activities do be done on defined interval such as Daily/ weekly / Monthly etc. If preventive maintenance activities are done properly, it should minimize or eliminate any potential break down and interruption in operations.
  - Predictive Maintenance
    - Some organization practice advanced predictive maintenance activities based on critical parameter monitoring at a defined interval or if any abnormality is observed.

**This modules captures data related to breakdown, preventive and predictive maintenance. It includes details such as date of maintenance, duration of break down, details of spares used, people involved in maintenance.**
